

Sterling's EZ-AC HINGED BLOWER

The effective solution to blower clean-out problems

Cost Effective

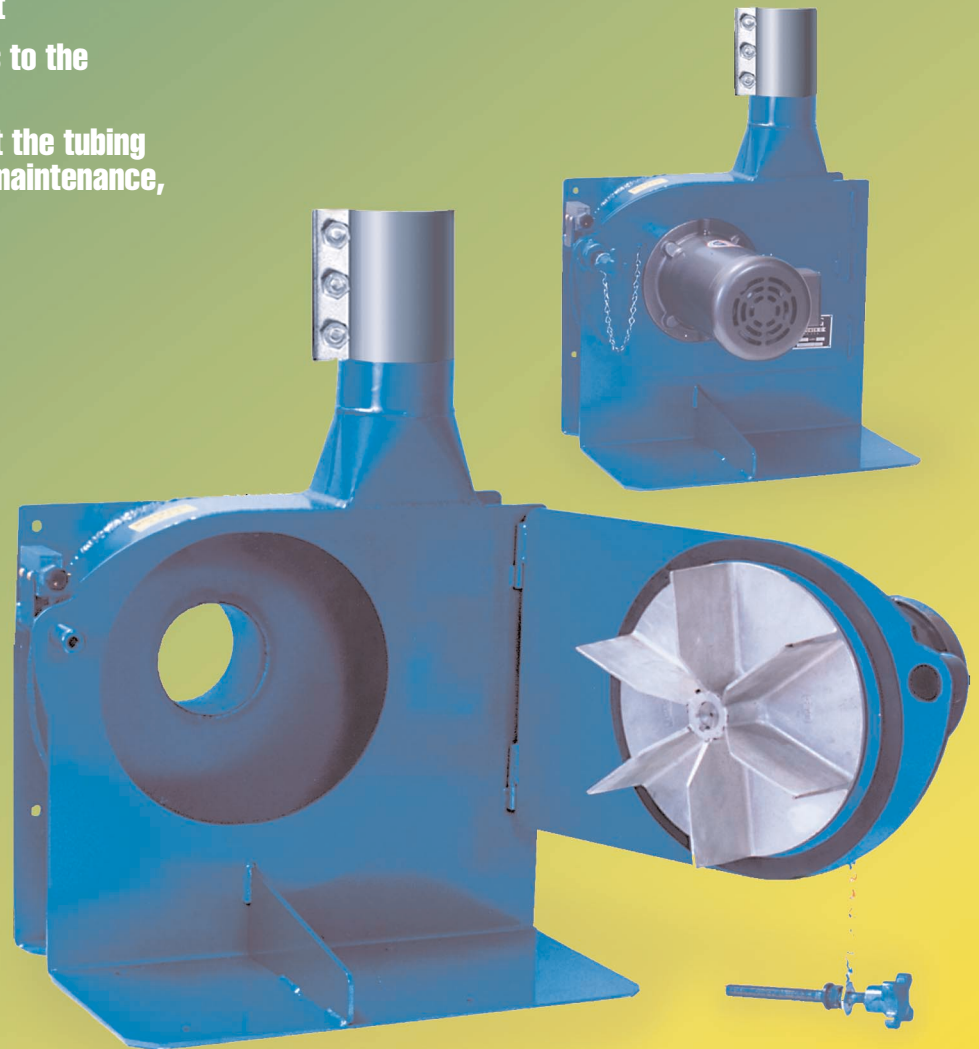

- Greatly reduces system downtime associated with blower clean-out
- Provides easy, immediate access to the blower's interior for clean-out
- Eliminates the need to disconnect the tubing from the system during blower maintenance, providing significant time-saving
- Allows for easy replacement of impeller, if necessary

Quality Design

- Electrically interlocked for operator safety
- Features all-welded, heavy gauge steel construction for durability
- Hand-finished interior to prevent material build-up and contamination
- Performance-proven in our application testing lab
- Engineered and manufactured in-house

Versatile

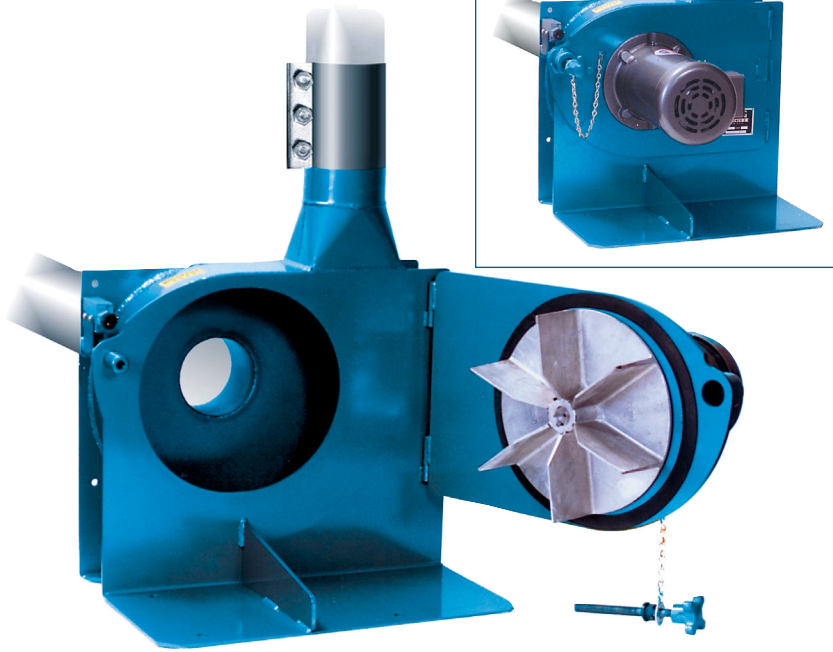

- Available in floor-mount and machine-mount models
- EZ-AC Blowers are manufactured for tubing sizes from 4" to 7"
- Surface Treated design available for applications involving materials where abrasion and high wear are factors
- Optional stainless steel construction available

EZ-AC Hinged Blower

Contact Sterling for dimensions and pricing.

Machine Mount Model

The EZ-AC Hinged Blower is available in a machine-mount model. By attaching the unit to an existing granulator or other piece of machinery, the result is an integrated, compact unit that can be easily relocated as your requirements change. The machine-mount model comes with the same standard features as our floor-mount version. The EZ-AC comes electrically interlocked for operator safety.

**Machine-mount model shown above
attached to granulator**

Sterling designs and manufactures any size or type of air conveying system to meet your needs. Customized engineering and quality craftsmanship make Sterling the cost-effective solution to material handling problems. Throughput rates range from 50 to 10,000 lbs/hr.

Sterling's support team includes sales engineers, design engineers, and R&D technicians who can determine the customer's needs.

The EZ-AC hinged blower is yet another innovation in Sterling Systems' complete line of material handling blowers. Its unique, compact design accommodates quick, safe access to the blower's interior for clean-out and maintenance. The need to disconnect the tubing in the blower system is eliminated, saving valuable, costly production time.

Whether due to a material change in the system or to scheduled maintenance, access to the blower's interior is now much easier and faster. The hinge is activated by a single latch mechanism, providing almost instant access to the blower's interior.

Designed to allow easy, simple access to the interior of the blower, the EZ-AC is a proven, cost-effective solution to blower clean-out problems. Not only is the process of opening the blower significantly faster, the EZ-AC even eliminates the need to disconnect the system's tubing from the blower to perform maintenance—saving valuable, costly production time.

The EZ-AC is available in floor-mount and machine-mount models. Machine-mount models attach directly to your granulator (or other machinery), making it an integral part of the equipment in an efficient, space-saving configuration. The EZ-AC provides a simple, effective solution to cutting downtime associated with blower clean-out.
